

Livestock Nutrition

Co-Product

Distribution

Scoular handles the distribution of our animal nutrition co-products.

Components

Wheat Midds are a co-product of the milling of wheat into flour. The particle size differs as different amounts of endosperm, bran, and germ from the wheat kernel are broken down.

Local farmers and feedlots utilize **WDGS** to feed large amounts of cattle at a lower cost.

DDGS are a longer-lasting nutrition option. The lower moisture levels allow for the product to be packaged and transported farther distances.

Scalehouse Load Out Hours

DDGS

Monday - Friday
6:00AM - 11:00PM
Saturday - Sunday
6:00AM - 1:30PM

WDGS

24-hours a day
7 days a week
